# The GreenLink

Restore desertified areas with an innovative tree growing method across the mediterranean border to increase resilience

## Ecosystem Services

## Expected results

### Impacts of climate change addressed:

#### Adaptation to risk of desertification:

Enhance the ecosystem services and stop degradation of European soils by improving soil quality and water retention.

#### Adaptation to risk of biodiversity loss:

Contribute to the creation of favourable microhabitats for several species.

#### Adaptation to increase of water scarcity:

Demonstrate the feasibility of planting trees without the use of irrigation by using the Cocoon techniques.

This project is co-financed by the European Union through the **LIFE programme**

Project partners are from **Italy, Greece, Spain and the Netherlands.**
